

Delay Due to High Project Costs

The county plans to build additional regional pump stations and pipelines between Black Diamond and Kent by the year 2020. To ensure that these facilities will be in place when needed, the County will continue to work with Soos Creek Water and Sewer District and monitor system flows.

***Schedule delay
SOOS CREEK PUMP STATION D
AND PIPELINE PROJECT***
.....

The map (on the previous page) indicates the approximate timing and locations of the new facilities that will serve southeast King County by 2020. The location of the connection to the county's existing sewer, at Southeast 277th Street in Kent, is also shown.

The predesign work and public input that were invested in siting the Covington Pump Station and pipeline in Kent and Covington will remain relevant and useful when the longer-term project again moves ahead. We thank those of you who participated in the project.

As part of its mission to protect public health and the environment, King County is responsible for conveying and treating wastewater from 34 cities and local sewer agencies in the central Puget Sound region. These local agencies provide connections to individual homes and businesses in their service areas while King County serves the region as a whole.
